HP PROFESSIONAL INNOVATIONS FOR BUSINESS NOTEBOOKS

ARE YOU SPENDING MINUTES ON A TASK THAT SHOULD TAKE SECONDS?

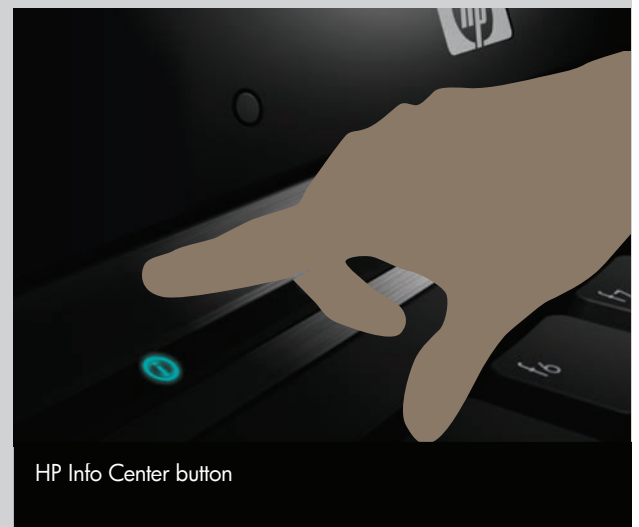

When you're on the go, quick access to information in your business notebook is one of the keys to staying productive. That's especially true with the calendar, contact, task and e-mail information stored in Microsoft® Office Outlook®.

So what happens when your notebook is turned off or in hibernation? Just to call up a single phone number or a stored e-mail message, you could spend minutes waiting for your notebook to come to life, your operating system to load and Outlook to open. That is precious time lost, over and over again, in the course of a business day. Along the way, you also consume a measurable amount of battery life—which can be an issue when you're hours away from your next stop.

At HP, we recognize this problem—and we have a solution: HP QuickLook 2.

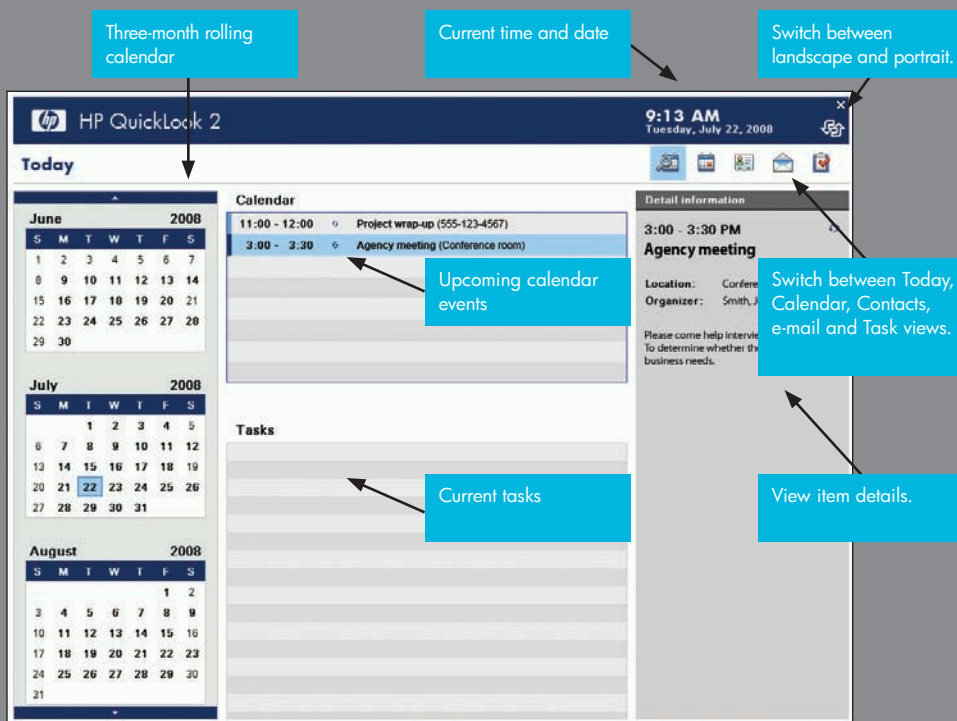

Just push the HP Info Button on your business notebook. HP QuickLook 2 springs to life in about ten seconds.² You then have immediate access to information from your Microsoft Office Outlook program. HP QuickLook 2 enables this fast access by proactively capturing information and storing it outside your computer's operating system.

You can specify the frequency at which data is captured, the type of data that is captured (calendar, tasks, contacts and e-mail), and the range of data that is captured. For example, you can capture and cache up to 1,000 messages from your in-box for ready access via HP QuickLook 2.

HP Info Center button

WORK FASTER AND SIMPLIFY YOUR LIFE WITH HP QUICKLOOK 2.

The screenshot shows the HP QuickLook 2 interface. At the top, it displays the HP logo, the title 'HP QuickLook 2', and the current time and date: '9:13 AM Tuesday, July 22, 2008'. Below this is a 'Today' section with a three-month rolling calendar for June, July, and August 2008. To the right of the calendar is a 'Calendar' view showing upcoming events: '11:00 - 12:00 Project wrap-up (555-123-4567)' and '3:00 - 3:30 Agency meeting (Conference room)'. Below the calendar is a 'Tasks' section. On the right side, there is a 'Detail information' panel for the selected 'Agency meeting' event, showing details like 'Location: Conference room' and 'Organizer: Smith, J.'. Several callout boxes with arrows point to specific features: 'Three-month rolling calendar' points to the calendar view; 'Current time and date' points to the top status bar; 'Switch between landscape and portrait' points to a small icon in the top right; 'Upcoming calendar events' points to the event list; 'Current tasks' points to the tasks section; 'Switch between Today, Calendar, Contacts, e-mail and Task views.' points to a set of icons below the status bar; and 'View item details.' points to the detail information panel.

Easy navigation

It's easy to get information with HP QuickLook 2. When you push the HP Info Button, the Today page opens. It displays a three-month calendar, upcoming calendar events and your active tasks, along with the current date and time. You can then use intuitive icons to navigate to more detailed information, including calendar entries, contacts list, e-mail messages and task lists.

How can HP QuickLook 2 help you stay productive? Consider these common scenarios.

Scenario 1: Finding a room number

You're on your way to a meeting in a multi-story office building. As you enter the building, you realize you don't know the meeting room number—it's in a meeting invitation on your computer. As you wait for the elevator, you hit the HP Info Button on your notebook PC. HP QuickLook 2 opens in seconds. With a few clicks, you find the room number—before your elevator arrives.

The screenshot shows a calendar interface for Tuesday, July 22, 2008. The time slots range from 7:00 to 3:30. A meeting titled "Project wrap-up, 555-123-4567 (11:00 AM - 12:00 PM)" is highlighted in blue. To the right, a "Detail information" panel shows the meeting title, location (555-123-4567), organizer (Smith, John), and a brief description: "Let's discuss whether we met the goals of this project, and what we can improve in the future."

Scenario 2: Accessing e-mail message

You're at the airport ready to board a plane in five minutes when you get a call from a co-worker. She needs your feedback on an urgent message from a business partner. You saw the message earlier in the day but didn't have time to read it. Using HP QuickLook 2, you pull up the message, complete with its embedded graphics, read it, provide your response to your colleague and end the phone call, just before boarding.

The screenshot shows an email interface. The sender is Susan Lang (10/18/2007) and the recipient is Roger Taylor (4/3/2008). The subject is "FREE HP Digital Photo Creative Kit + Savings on Ink". Below the email content, there is a navigation bar with categories like Notebooks, Desktops, iPAQs, Printers, Ink & Toner, Photography, TVs, and Outlet. A large advertisement for "HP HOME & HOME OFFICE STORE" is displayed, featuring the text "GET CREATIVE WITH YOUR PRINTING" and images of a woman and printed photos.

Scenario 3: Finding a contact number—and saving battery life

Your last meeting of the day is winding up. Your business notebook is running low on battery power so you put it into hibernation mode. Soon after, your manager asks you for a customer's contact information. Using HP QuickLook 2, you open your contacts file and call up the information—consuming very little battery power. When you close HP QuickLook 2, your machine goes back into hibernation.

The screenshot shows a contacts list interface. The list is organized by alphabetical order (A-Z and 123). The contact "All Star Sports (Retail)" is selected. To the right, a "Detail information" panel shows the contact name and a business phone number: (555) 321-6543.

RELAX—HP QUICKLOOK 2 HAS YOU COVERED.

Security features

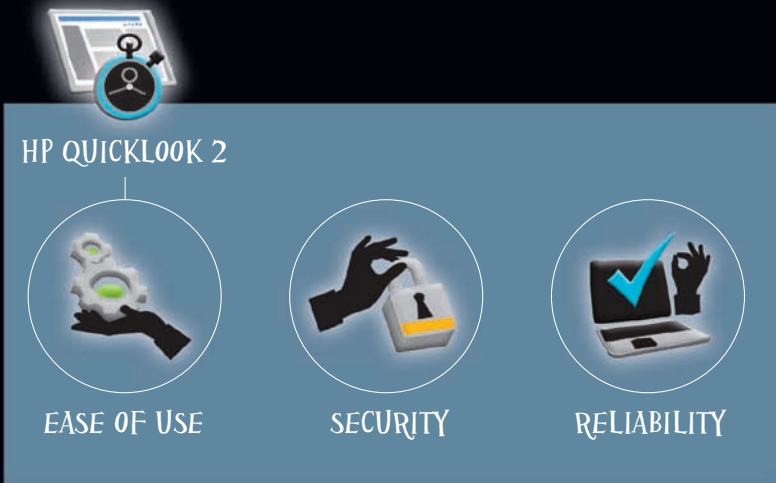

HP QuickLook 2 gives you the confidence that comes with special security features. Security options include AES 192-bit encryption¹ of the data cached in the HP QuickLook 2 program.³ In addition, you can create your own personal identification number (PIN) to restrict access to your information. And because HP QuickLook 2 resides on a separate hard drive partition, it can co-exist with encryption features in your main operating environment.

Support for multiple users

Do you share a business notebook with a colleague? That's not a problem for HP QuickLook 2. It gives you the option of setting up multiple logins, so different people can share the same notebook with personalized access to HP QuickLook 2.

WORK FASTER WITH HP QUICKLOOK 2:

- Find information in seconds when your computer is off or in hibernation.
- View calendar, contact, e-mail and task information with the push of a button.
- Cache data from Office Outlook 2003 and 2007 automatically.
- Leverage a solution that's built for Windows Vista® and Windows® XP.

Look for these innovations on HP business notebooks.

LEVERAGE THE POWER OF HP PROFESSIONAL INNOVATIONS.

HP QuickLook 2 is among the many innovations that allow HP business notebooks to deliver an enhanced mobile computing experience. Collectively, these innovations increase the security, reliability and ease of use of your HP business notebook—so you can stay productive when you're on the go.

In short, HP QuickLook 2 and other HP Professional Innovations help keep you going places—fast.
